

## PRODUCT DESCRIPTION

Wide cover dedicated to the SEPOD, SEKODU and SEKOMA extrusions. It has excellent diffusing properties. The cover's characteristics are high quality and uniform cross-section.

Trimming of SZER cover: Trim SZER cover shorter than the extrusion due to a different expansion coefficient of aluminum and plastic. The difference in length should be made adequate in relation to the length of the fixture. E.g. in the case of a 2m fixture, a cover should be 2mm shorter than the extrusion on its both ends.

Light transmission: 52%\*

\* the values given in % are approximate values and because of the different optical phenomena occurring in the different extrusions, these values may differ slightly.

- Good light diffusion
- Aesthetic values
- Good optical properties
- The highest surface standard
- Reduces the glare phenomenon
